

Move Digital

blu

BLU LABEL UNLIMITED

STRATEGY & PROPOSITION · 2026

AI and fintech infrastructure, ready to sell today.

Move Digital as Blu Label Unlimited's technology partner — the Zara Agentic Marketplace, Protea LLM and a nine-product AI & fintech stack, white-labelled onto Blu Label's licensed rails and distribution, and offered to the customers Blu Label already serves: banks, formal retail, SPAR, petroleum forecourts, government and betting operators.

THE PROPOSITION

Blu Label sells AI. Move Digital powers it.

01 · THE PLATFORM EXISTS

Live, not a roadmap

Nine products in market today — consumer AI, an agent marketplace, sovereign language models, payments, identity, fraud and enterprise tooling. Integration is measured in days.

02 · THE CHANNEL EXISTS

Your enterprise base

Blu Label already serves the buyers — banks, formal retailers, SPAR, petroleum forecourts, government programmes and betting operators. One trusted commercial wrapper, many AI deals.

03 · THE TRUST EXISTS

Compliance baked in

FICA, POPIA, SARB & FATF alignment, SOC 2-grade controls, on-prem options and real-time fraud defence are part of the stack — not an integration project for the customer.

9

Live products, one studio — white-label & multi-tenant ready

Days

To stand up a branded deployment for a Blu Label customer

B2B2B

Blu Label owns the customer; Move Digital runs the technology

WHO WE ARE

An African product studio building at the edge of **AI** and **money**.

- **We ship products, not slideware.** Move Digital designs, builds and operates nine of its own AI and fintech products — live, in-market, and used by real people and institutions.
- **Africa-first by design.** WhatsApp-native, data-light, multilingual, and compliant with local rails and regulation — FICA, POPIA, SARB.
- **Full-stack, in-house.** Consumer AI, agents, language models, payments, identity, fraud, marketplaces and developer tools — one team across the whole value chain.

WHAT WE BUILD

Seven domains of the modern **African stack**.

CONSUMER AI**The channel**

A personal AI on WhatsApp — the demand layer and the direct consumer relationship.

AI AGENTS**The workforce**

A marketplace of business AI agents that sell, support and run operations in plain language.

LANGUAGE MODELS**The intelligence**

Protea LLM — a sovereign, SA-tuned model layer with data residency and on-prem deployment.

FINTECH INFRASTRUCTURE**The rails**

Compliant, instant cross-border settlement for banks and fintechs.

IDENTITY & FRAUD**The trust layer**

KYC/KYB verification and real-time fraud scoring under every transaction.

MARKETPLACES**The platforms**

Two-sided marketplaces with KYC, e-contracts and payments built in.

DEVELOPER & ENTERPRISE**The tools**

AI security scanning and financial-reporting automation for enterprises.

THE PORTFOLIO

Nine products. One studio.

**Zara AI**

Personal Life OS on WhatsApp.

ZARAAI.DIGITAL**Zara Agents**

Agentic marketplace for business.

ZARAAI.DIGITAL/BUSINESS**Protea LLM**

South Africa's sovereign AI model layer.

NEW · SEE PAGES 10-11

**Swifter**

Cross-border stablecoin remittance.

SWIFTER.DIGITAL/SEND**PayGuard**

ML real-time fraud defence.

PAYGUARD.AFRICA**eKYC Africa**

Digital identity verification.

EKYC-AFRICA.COM**BookMyAct**

Entertainment marketplace.

BOOKMYACT.CO.ZA**CodeViz**

AI security scanning & fixes.

CODEVIZPlus **Results Studio** — financial results PDF → verified interactive HTML for listed companies (page 17).

PRODUCT · CONSUMER AI

Your Personal Life OS — right inside WhatsApp.

A personal AI super-assistant on the app everyone already has. No download, no menus, no USSD. Zara handles daily tasks, bookings, briefings, shopping and more — in plain language, in 7 languages including isiZulu, isiXhosa and Afrikaans.

WHAT IT DOES

- 40+ command groups & 50+ AI models in one chat
- Outbound calls — books restaurants & appointments for you
- Google, Spotify & calendar integration
- 07:00 morning briefing — weather, load-shedding, deals
- Multi-store price comparison across SA retailers
- Persistent memory & a photorealistic voice avatar

The agentic marketplace — an AI workforce as a platform.

THE CATALOGUE

100+ ready agents

Sales, support, operations, marketing, collections, HR — specialised agents that deploy in minutes, individually or chained into workflows.

THE BUILDER

No-code agent studio

Compose an agent from skills, knowledge and guardrails — no engineering team required. Test in a self-serve sandbox before anything ships.

THE RUNTIME

Durable execution

An orchestration engine that chains tasks end-to-end, calls tools, holds state across days and recovers from failures — production-grade, not a demo loop.

THE CONSOLE

Admin & analytics

Per-tenant usage, performance and cost dashboards; human handover queues; full conversation audit for compliance teams.

100+

Specialised business agents, ready to deploy

Minutes

To embed an agent on WhatsApp, web or API

Multi-tenant

White-label ready — every Blu Label customer gets their own branded instance

The bells and whistles — **all standard, all live.**

Persistent memory

Agents remember every customer across conversations, channels and months — context compounds instead of resetting.

Company knowledge (RAG)

Upload policies, price lists and product docs; agents answer from the business's own knowledge, with citations.

Voice & outbound calling

Agents speak — inbound voice notes understood, outbound calls placed for bookings, reminders and collections.

Tools & actions

Agents do, not just say: take payments, verify identity, book slots, update the CRM, issue vouchers — via governed tool calls.

Workflow chaining

Chain agents into end-to-end journeys — lead → qualify → KYC → quote → payment → onboarding — with state carried through.

Human handover

Confidence-based escalation to human teams with full context attached; humans and agents share one inbox.

Guardrails & audit

Topic fences, PII redaction, approval gates on sensitive actions, and a complete audit log of every decision.

Metering & billing

Token and action metering per tenant, per agent — usage-based billing your finance team can reconcile.

7+ languages

English, isiZulu, isiXhosa, Afrikaans, Sesotho and more — powered by the Protea LLM layer (next page).

The USP: agents that **transact**, not just chat.

Capability	Generic chatbot platforms	Zara Agentic Marketplace
Money moves in-chat	✗ Redirects to a website or call centre	✓ Payments, vouchers & remittance executed on licensed rails
Identity under the journey	✗ KYC is someone else's problem	✓ eKYC Africa verifies in <60s, inside the conversation
Fraud at transaction time	✗ None	✓ PayGuard scores every transaction in <100ms
African languages & context	✗ English-first, US-tuned	✓ Protea LLM — SA-tuned, multilingual, data-resident
Where customers actually are	✗ Web widgets	✓ WhatsApp-native, data-light, works on any phone
White-label & multi-tenant	Partial — per-seat SaaS pricing	✓ Branded per customer, priced per tenant, rev-share friendly

The moat is the combination: no other platform in the region pairs an agent marketplace with its own identity, fraud and settlement layers — live, in one stack.

PRODUCT · LANGUAGE MODELS

South Africa's sovereign AI layer.

A South African language-model layer — tuned here, hosted here, governed here. Protea pairs SA-tuned models for local languages and context with a provider-agnostic router across 50+ frontier models — so every workload runs on the right model, and sensitive workloads never have to leave the country.

WHAT IT DELIVERS

- SA-tuned models — isiZulu, isiXhosa, Afrikaans, Sesotho & more
- Data residency in South Africa · POPIA-first by design
- On-prem & private-cloud deployment for banks and government
- Provider-agnostic routing with automatic fallback & cost guards
- Domain packs: financial services, retail, public services
- Powers Zara, the agent marketplace and every white-label tenant

WHY IT MATTERS

Sovereignty is the enterprise unlock.

GOVERNMENT

Sovereign by default

Citizen data stays in-country, on infrastructure the state can inspect — the precondition for public-sector AI at any scale.

BANKS

Regulator-ready

On-prem or private-cloud inference, full audit trails and POPIA data residency — AI the compliance office can approve.

REACH

Speaks the market

Local-language fluency is conversion: customers transact in the language they trust, from Sandton to Umlazi.

ECONOMICS

Right-sized cost

Routing sends heavy reasoning to frontier models and volume traffic to efficient local models — measured per token, per tenant.

11

Official languages in scope for the Protea programme

On-prem

Deployment option — data never leaves the customer's network

50+

Models routed behind one API — no vendor lock-in

PRODUCT · FINTECH INFRASTRUCTURE

Cross-border stablecoin remittance, **settled in seconds.**

The invisible technology layer behind compliant remittance. Licensed banks and fintechs integrate one REST API — Swifter never holds customer funds, and settles across 20+ African corridors in under 60 seconds via stablecoin rails.

UNDER THE HOOD

- Real-time FX aggregation across liquidity providers
- Settlement in <60s via USDC on Solana
- Built-in KYC, AML & sanctions — SARB & FATF aligned
- Payouts to bank, mobile wallet & business A2A
- ~50% cheaper than correspondent banking
- 99.97% uptime SLA · white-label dashboard

20+

African corridors live

<60s

End-to-end settlement

99.97%

Uptime SLA

PRODUCT · FRAUD PREVENTION

ML fraud defence — before the money moves.

A transaction-time fraud decision engine. PayGuard detects, scores and blocks fraud in under 100 ms — across payments, SIM swap, social engineering, account takeover and mule networks. Four lines of code to integrate.

HOW IT DEFENDS

- 40+ device & behavioural signals in real time
- 20+ fraud rules across 6 attack categories
- Neo4j fraud graph for mule-network detection
- ML anomaly detection trained on African patterns
- Device fingerprinting · emulator & jailbreak detection
- Native iOS & Android SDK · analytics dashboard

<100ms

Fraud decision at transaction time

4 lines

Of code to integrate the SDK

6

Attack categories covered

PRODUCT · IDENTITY & COMPLIANCE

Verify any African ID in under 60 seconds.

Africa's leading eKYC platform — built for all 54 countries. AI document verification, passive biometric liveness and AML screening in one flow. FICA & POPIA compliant, and it even works offline or over WhatsApp.

WHAT IT VERIFIES

- 200+ document types across 54 African countries
- Passive biometric liveness — no user actions needed
- Screening vs 1,300+ sanctions, PEP & watchlists
- KYB — business, registry & beneficial-owner checks
- WhatsApp verification & offline capture with sync
- AES-256 · SOC 2 · GDPR · POPIA ready

54

African countries covered

99.8%

Verification accuracy

<60s

PRODUCT · MARKETPLACE

South Africa's first entertainment marketplace.

Where event planners meet verified entertainers. Browse DJs, bands, MCs, photographers and more across 12 categories — request quotes, sign electronic contracts and pay, all in one place. Artists join free and only pay a 10% fee on confirmed bookings.

ON THE PLATFORM

- Verified entertainers across 12 categories
- eKYC identity verification — verified acts only
- ECTA-compliant electronic contracts & signatures
- Quote requests, real-time chat & secure EFT payments
- Success-based: 10% fee only on paid bookings
- Installable PWA with push notifications

12

Entertainer categories

10%

Fee — only on confirmed bookings

R0

Upfront cost to join or browse

PRODUCT · DEVELOPER & SECURITY

Find, verify and fix vulnerabilities — automatically.

The AI security platform that fixes what it finds. Deterministic static analysis pairs with AI triage to surface real vulnerabilities, suppress false positives, and ship the fix as a pull request — all on your own infrastructure. No code leaves your network.

HOW IT WORKS

- 13 analysis dimensions · Semgrep security engine
- AI-verified findings that cut false positives
- Auto-remediation — patches shipped as a real PR
- SARIF export & CI/CD gates (Azure DevOps, GitHub)
- Self-hosted — zero cloud, MNPI-safe
- Compliance reporting (SOC 2 / PCI)

PRODUCT · FINANCIAL REPORTING

Financial results PDF → **verified interactive HTML.**

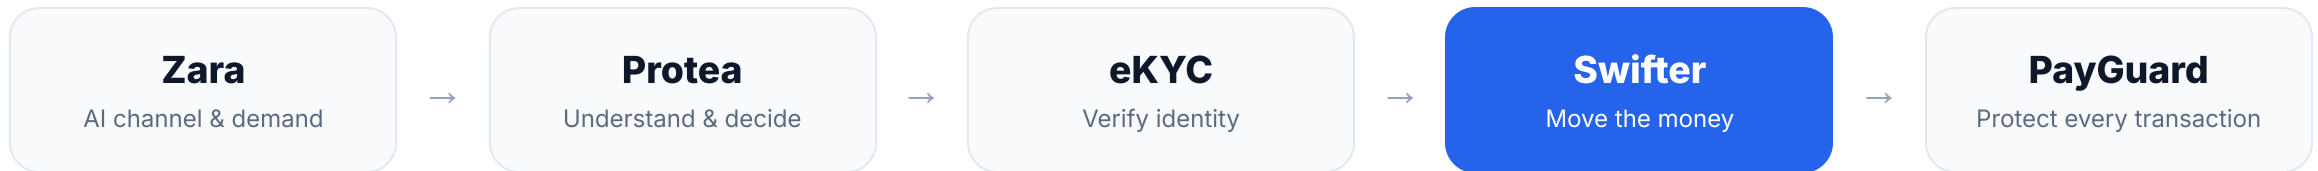

Turn a **published results PDF** into a **brand-faithful microsite**. A nine-step pipeline with human gates derives every visual decision from the source PDF's measured design DNA — and **the AI never touches a number**: numeric content flows by reference only, verified by blocking gates before export.

THE PIPELINE

- Design-DNA extraction — brand pulled from the PDF
- Verbatim numbers, end-to-end — never re-typed
- Blocking QA gates before anything ships
- Human review & sign-off workflow
- Private & secure by design — MNPI-grade
- Export-ready interactive results microsite

THE ECOSYSTEM

Verify once. Serve across the stack.

- **One consumer identity, verified once** — eKYC clears a customer for Zara, Swifter, BookMyAct and any partner on the network.
- **The money moves and stays safe** — Swifter settles it, PayGuard scores every transaction in real time so trust scales with volume.
- **Enterprise tools compound the moat** — CodeViz secures the code and Results Studio automates financial reporting for the same institutions.

THE FIT

Two halves of one offering.

BLU LABEL BRINGS

- Licensed VAS & wallet rails — the regulated system of record
- An ADLA license for compliant cross-border remittance
- Massive retail & informal distribution — cash-in / cash-out reach
- The enterprise relationships — banks, formal retail, SPAR, forecourts, government & betting

MOVE DIGITAL BRINGS

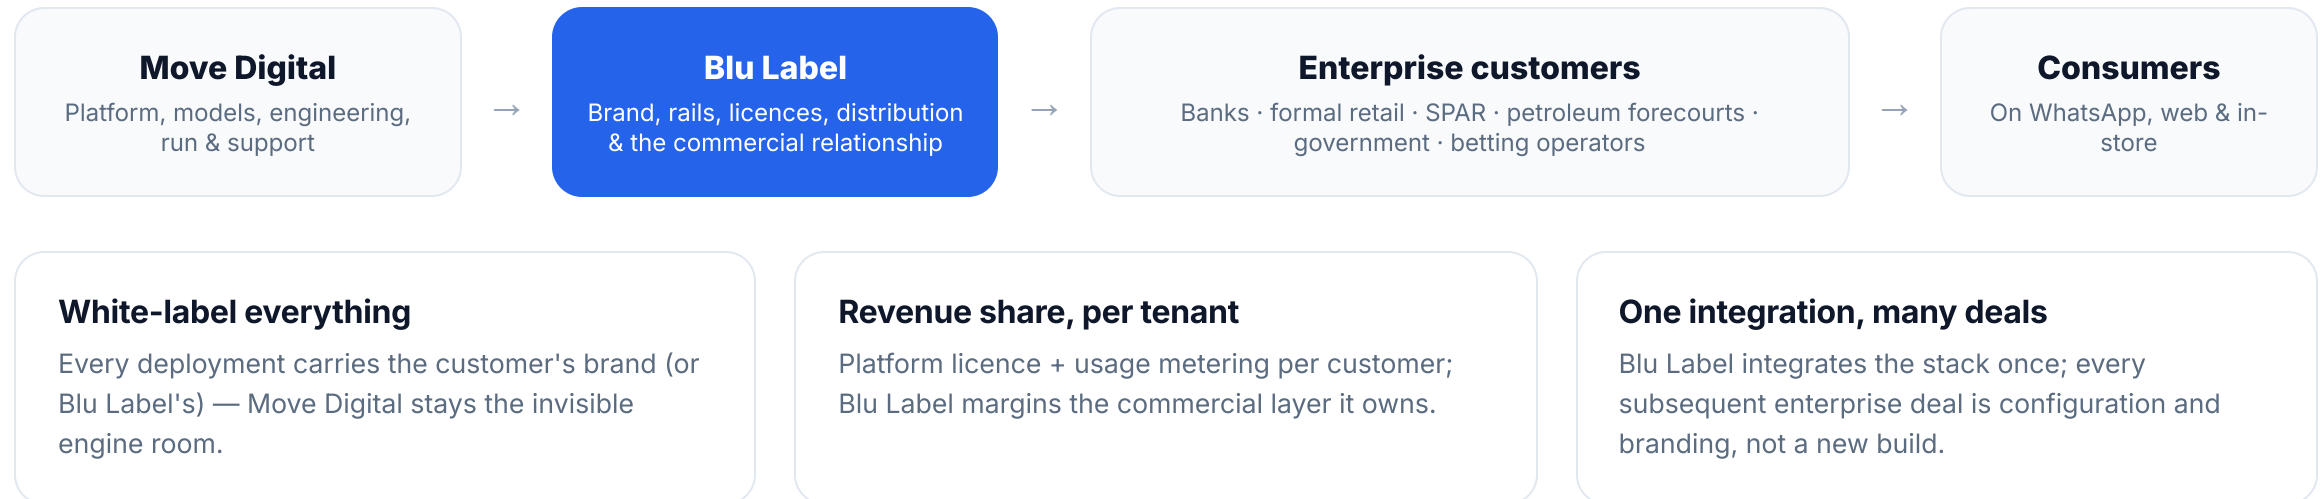

- The Zara Agentic Marketplace — a white-label AI workforce platform
- Protea LLM — sovereign, multilingual, on-prem-ready intelligence
- eKYC identity + PayGuard fraud + Swifter remittance technology
- A live nine-product stack — days to integrate, not quarters

Together: **the AI solutions provider to Blu Label's enterprise base** — sold under a brand those customers already trust, powered by a stack that already exists.

ROUTE TO MARKET

Your customers. Our platform. **One offer.**

SECTOR PLAY · 01

Banks — agentic banking, compliantly.

SERVE**Banking agents on WhatsApp**

Balance, statements, disputes, product questions — resolved by agents in the customer's language, with human handover.

Zara Agents

Protea

ONBOARD**FICA at digital scale**

Account opening and KYC-refresh campaigns in chat — document, liveness and sanctions checks in under 60 seconds.

eKYC Africa

PROTECT**Fraud under every rand**

Transaction-time scoring, SIM-swap and mule-network detection — <100ms decisions that cut losses without adding friction.

PayGuard

EXPAND**Remittance in a box**

A branded cross-border product on Swifter's rails and Blu Label's ADLA licence — 20+ corridors, settled in seconds.

Swifter

Blu rails

Deployment options the compliance office can sign: on-prem Protea inference, SA data residency, full audit logs, SOC 2-grade controls.

SECTOR PLAY · 02

Formal retail, SPAR & petroleum forecourts.

RETAIL & SPAR**The WhatsApp storefront**

Ordering, promotions, price checks and store-finder agents per banner or per store — with vouchers and payments completed in-chat on Blu Label rails.

Zara Agents

Blu VAS

RETAIL OPERATIONS**Back-of-store agents**

Supplier KYB onboarding, staff helpdesk, shrinkage reporting and head-office knowledge agents that answer from the retailer's own manuals.

eKYC KYB

RAG

FORECOURTS**The driver relationship**

Loyalty, fuel vouchers, fleet accounts and airtime/VAS upsell at the till — a per-forecourt agent that turns a fill-up into a repeat customer.

Zara Agents

PayGuard

Blu vouchers

Per-store

Tenancing — every banner, region or site gets its own branded agent

In-chat

Payments & vouchers on rails Blu Label already operates

Data

First-party conversational data the retailer owns — consented, POPIA-clean

SECTOR PLAY · 03

Government — citizen services that answer.

ACCESS**Multilingual citizen assistants**

Municipal billing, service requests, programme information — answered on WhatsApp in all official languages, 24/7.

Zara Agents

Protea

IDENTITY**Verification at scale**

Grant, licence and registration journeys with document + biometric verification built in — fraud reduced at the source.

eKYC Africa

SOVEREIGNTY**On-prem Protea**

Citizen data stays on state-controlled infrastructure, in-country — the deployment model public-sector AI requires.

Protea LLM

INTEGRITY**Auditable by design**

Every AI answer logged, every action gated, POPIA-first data handling — accountability that survives an audit.

Governance layer

Blu Label's national footprint and existing public-sector relationships carry the offer; Move Digital's stack makes it deliverable this fiscal year.

SECTOR PLAY · 04

Betting & gaming — growth with guardrails.

ONBOARD**FICA in the chat**

Punter registration with ID, liveness and age verification in under a minute — conversion up, compliance intact.

eKYC Africa

PROTECT**Fraud & bonus abuse**

Mule networks, multi-accounting, SIM-swap and bonus-abuse rings detected at transaction time.

PayGuard

ENGAGE**Betting concierge agents**

Deposits, withdrawals, odds queries and support on WhatsApp — with vouchers and top-ups on Blu Label's rails.

Zara Agents

Blu vouchers

RESPONSIBLE PLAY**Guardrails as a feature**

Limit-setting, self-exclusion honouring, cooling-off flows and responsible-messaging enforcement built into every agent — provincial-regulator alignment by design.

Governance layer

Betting is one of the highest-volume categories on Blu Label's voucher rails — the sector where conversational AI plus compliance tooling monetises fastest.

TECHNICAL ARCHITECTURE

Built like infrastructure, not a demo.

Channels

WhatsApp Business API · web · native iOS & Android SDKs — integrate in days

AI & orchestration

Protea LLM + provider-agnostic router · agent runtime · durable workflow engine · intent + step-up auth

Product services

Zara · Swifter · PayGuard · eKYC · BookMyAct — independent REST + webhook microservices, multi-tenant

Data & rails

Postgres system of record · Neo4j fraud graph · stablecoin rails (USDC / Solana) · private blob storage

TypeScript

Next.js

React

Python

FastAPI

Flask

Postgres

Neo4j

Redis

Docker

Sempreg

Playwright

zod / Drizzle

AI STRATEGY & GOVERNANCE

AI where it helps. Guardrails where it counts.

MODEL STRATEGY

- Protea LLM + provider-agnostic layer — Claude, GPT / Azure OpenAI, self-hostable open models
- Routing + automatic fallback; the right model per task (cost / latency / quality)
- 50+ models across the platform — no vendor lock-in
- Measured token accounting & per-call cost guards

AI GOVERNANCE

- **The AI never touches a number** — financials flow by reference, checked by deterministic gates
- **AI never holds funds or credentials** — it reads intent; licensed rails execute after step-up auth
- Deterministic engines where correctness is non-negotiable, AI-verified before action
- Human-in-the-loop gates · blocking QA before anything ships

SECURITY & COMPLIANCE

- KYC / KYB, AML & sanctions — FICA, POPIA, GDPR, SOC 2, SARB & FATF
- AES-256 · RBAC · audit logs · HMAC webhooks · OIDC / Entra SSO
- Self-hosted / on-prem option — data never leaves the network
- Real-time fraud scoring under every transaction (<100ms)

READINESS

Not a roadmap. Available right now.

Capability	Status today	To white-label for a Blu customer
Zara Agentic Marketplace	Live — zaraai.digital/business	Days — branding + tenant config
eKYC Africa	Live — 54 countries, 200+ documents	Days — API keys + flow styling
PayGuard	Live — SDK, 4 lines of code	Days — SDK drop-in
Swifter remittance	Live — 20+ corridors	Weeks — corridor & licence config
Protea LLM (hosted)	Live — routing layer in production	Days — tenant policy + language packs
Protea LLM (on-prem)	Deployable — hardware dependent	Weeks — customer infrastructure

THE 90-DAY LIGHTHOUSE

- **Weeks 1-2:** pick two Blu Label customers and one use case each; sign the data & brand pack
- **Weeks 3-8:** white-label deployment, integration with the customer's systems, compliance sign-off
- **Weeks 9-12:** live pilot with real customers, measured against agreed KPIs
- **Day 90:** joint case study + rate card — the sales asset for the rest of the base

THE OPPORTUNITIES

Three ways to partner — on the table.

01 · TECH PARTNER

Blu Label sells AI solutions

Move Digital becomes Blu Label's technology partner: the Zara Marketplace, Protea and the trust stack, white-labelled to Blu's enterprise customers under a platform licence + revenue share.

02 · VAS AGGREGATION

Blu powers Zara's VAS

Zara's AI channel sells airtime, data, electricity, bills and vouchers — with Blu Label Unlimited as the VAS aggregator behind the chat.

03 · SOLUTIONS ON DEMAND

Move Digital builds for Blu

Blu engages Move Digital for custom AI and fintech builds across identity, fraud, remittance and tooling — deal by deal.

The models compound: the tech-partner motion (01) creates the platform economics, while (02) and (03) deepen the relationship on both sides. We propose starting with **01 — two lighthouse customers in 90 days.**

WHY MOVE DIGITAL

Built for Africa. **Shipped fast.**

AFRICA-FIRST

Data-light, multilingual, WhatsApp-native — built for how the continent really transacts.

COMPLIANT

Licensed rails, KYC/AML, FICA, POPIA, SARB & FATF alignment baked in, not bolted on.

FULL-STACK

Nine products spanning channel, agents, models, payments, identity, fraud and tooling.

SHIPS IN DAYS

Live products and standard APIs — integrate in days, not quarters.

GET IN TOUCH

The next move is **yours.**

Whichever entry point fits best — the tech-partner platform, VAS aggregation, or solutions on demand — the stack is live and the first two lighthouse deployments can start this quarter. We're ready when you are.
